

## Synthetic Fibre (Non Heat Defiant)

### Wigs, Hair Pieces, Hair Extensions

#### Cleanse & Condition

- Before washing your wig, hair piece or extension, gently remove any tangles with a paddle brush or wide tooth comb or afro comb
- Hold wig, hair piece or extension under cool running water. Gently lather the hair with a capful of **shampoo (paraben and sulfate free)** while making sure that the hair is travelling in the same direction. **DO NOT** rub hair as this may cause tangling
- Rinse thoroughly in cool water until the water runs clear
- For shorter styles:
  - Wrap wig, hair piece or extension in a towel and gently pat dry
  - Gently detangle hair using a wide tooth comb or afro comb
  - Use a **leave-in conditioning spray** (3-5 pumps) keeping away from base of wig, hair piece or extension
- For longer styles:
  - Use a **cream conditioner**, keeping away from base of wig, hair piece or extension, massage through ends and rinse out
  - Gently detangle hair using a wide tooth comb or afro comb

#### Dry & Style

- Allow wig, hair piece or extension to air dry naturally by placing on a wig stand. **DO NOT** blow dry
- Styling is very easy. We recommend simply using your fingertips or wig brush/comb for your desired style
- If fullness is desired, gently backcomb hair using your wig, hair piece or extension brush/comb, then smooth the surface hair over and apply holding spray
- **DO NOT** use heat to style synthetic fibre (curling irons, flat irons or blow dryers)

#### Tips

- Be cautious when standing near a heat source (i.e. open oven, heater, etc.) Excessive heat can damage the fibre
- We recommend using **Jon Renau HD Smooth Detangler** with a wide tooth comb or afro comb to detangle your wig, hair piece or extension. This is especially important with the mid-length to long length wigs, hair pieces or extensions.
